Cognos Framework Manager

Reporting Packages
**Weekly Admissions Snapshot**

- Tracks derived admissions counts: total number of applications, number of applicants admitted, ...
- Freezes data every week for an 18 month period for each admissions term
- Allows admissions staff to answer questions such as:
  - Which programs or plans tend to attract early or late applicants
  - What do application trends look like for different programs
  - How do my weekly application trends for this fall term compare to the same points in time for the previous 3 fall terms
Application Funnel

• Collects information throughout the cycle of an application
• Same counts as the snapshot but also has additional counts and dates
• Allows admissions staff to answer questions such as:
  o What kind of applicants tend to withdraw from the application process, and at what points in time?
  o Where are students being lost?
  o How does this year’s funnel compare to previous years?
  o What is the average number of days to make an admission’s decision for an application that is ready for review.
