Please Choose Your Browser

Multiple registration requests for the same ID on the same browser and computer usually mean that you have to check browser settings.
Safari’s “Private Browsing” feature will cause the registration to not store in the browser. This will require multiple registrations. Please ensure this feature is disabled.

The browser will display “PRIVATE” in the address bar if the feature is enabled. Clicking on the “PRIVATE” icon will give you the option to turn the feature off.

It is important that the history is stored to avoid multiple registrations.
Chrome does not have an auto-clear option for history. You should not experience multiple registrations after the first registration on this browser.

You will experience multiple registrations if you manually clear your history or if you are browsing in incognito mode.
Navigate to **Tools > Options**. On the **Privacy** tab ensure that the box for “Clear history when Firefox closes” is unchecked.

It is important that the history does not clear to avoid multiple registrations.
Navigate to **Tools > Internet Options**. On the **General** tab ensure that the box for “Delete browsing history on exit” is unchecked.

It is important that the history does not clear to avoid multiple registrations.
