Supported Browsers and Operating Systems

SelectSite Application Suite
Updated March 2012
The purpose of this document is to educate our customers on the supported and certified Browsers, Operating Systems, and Browser/Operating System combinations recommended for use with the SelectSite / HigherMarkets application.
The SelectSite /HigherMarkets application is a browser-based, hosted application that does not have inherent minimum operating system (OS) specifications.

However, minimum browser requirements do exist. In order to meet the needs of clients and offer the most current technologies, SciQuest maintains a list of certified and supported browsers recommended for use of the SelectSite / HigherMarkets application.

Certified OS/Browsers Combinations
- The use of these combinations is validated with every major and maintenance release of SelectSite / HigherMarkets.

Supported OS/Browsers Combinations
- The use of these combinations is supported by SciQuest, but is not necessarily tested with each release.

Non-Certified and Unsupported OS/Browser Combinations
- Any OS/Browser combination not listed in the certified or supported sections have not been validated by SciQuest and are not recommended. Issues arising from the use of any combination not listed as supported or certified will not be addressed by SciQuest.
SciQuest has tested specific mobile OS/Browser combinations for the Email Approvals functionality. Though not an exhaustive list of OS/Browser combinations that can utilize this feature, only those tested are included on the list.

SciQuest applications are developed using generally accepted standards for browser-based applications.

It is SciQuest’s policy to discontinue support of Browser / Operating System combinations based on their age (typically >3 years) or discontinuation of support by their manufacturer.

- This document will be updated periodically and will be available on the Solutions KnowledgeBase. SciQuest will provide its customers three or more months notice when OS/Browser combinations are no longer supported.

**Note:** Pop-up blocking should be turned off when working in the Production environment (solutions.sciquest.com/org/<your org>).
Summary of Changes for 12.1

- The following changes take effect with the 12.1 release (March 25, 2012)
- Browser support additions:
  - Firefox 10 has been added to the certified browser list
  - Safari 5.0 has been added to the certified browser list for Mac
  - Support has been added for Chrome v.8 – 17
  - Support has been added for iOS 5
  - Support has been added for Internet Explorer 9
- Browsers no longer supported:
  - Support has been removed for Firefox 3.0
  - Support has been removed for Chrome browsers prior to version 8.0
  - Support has been removed for Safari browsers prior to version 4.0
The following table lists the supported, certified, and non-supported combinations of Browser/Operating Systems for use with the SelectSite / HigherMarkets application starting with the 12.1 release (March 2012).
