

REQUEST FOR BID #2022-067
SECURITY ORCHESTRATION, AUTOMATION, AND RESPONSE (SOAR)
SOLUTION
RESPONSE ADDENDUM #01
April 6, 2022

QUESTIONS

1. Requirement #9 states ***“Built-in support to convert between these common data interchange formats: text, json, excel spreadsheets, csv files.”***

Clarifying question from NuHarbor Security:

Is UMaine interested to know if our SOAR solution can bring in (or ingest) the data from these sourcetypes? If not, what exactly is being asked? We ask that UMaine's evaluation team elaborate on the requirement.

ANSWER: We require the SOAR solution to be able to ingest the mentioned data types and also to have functionality to convert between those types, for example - ingest an excel file and convert to csv, ingest csv or json data and convert to ascii - as might be required when automating processes involving data in multiple formats.
